PYTHON DOCUMENTATION GENERATOR

Welcome to my **Sphinx github webpage** tutorials! In those tutorials, you will learn how to use Sphinx to create .html and .pdf and how to hookup your Sphinx webpage to github. The PDF version can be downloaded from [HERE](#).

CHAPTER ONE

PREFACE

Chinese proverb

Good tools are prerequisite to the successful execution of a job. – old Chinese proverb

1.1 About

1.1.1 About this tutorial

This document is a summary of my valueable experiences in using Python documentation Sphinx with Github webpage. The PDF version can be downloaded from [HERE](#). **You may download and distribute it. Please be aware, however, that the note contains typos as well as inaccurate or incorrect description.**

In this repository, I try to use the detailed demo code and examples to show how to use Sphinx to generate the .html and .pdf documents and how to hookup them automatically on Github. If you find your work wasn't cited in this note, please feel free to let me know.

Although I am by no means a python programming and Sphinx expert, I decided that it would be useful for me to share what I learned about Sphinx in the form of easy tutorials with detailed example. I hope those tutorials will be a valuable tool for your studies.

The tutorials assume that the reader has a preliminary knowledge of python programing, LaTex and Linux. And this document is generated automatically by using [sphinx](#).

1.1.2 About the authors

- **Wenqiang Feng**
 - Data Scientist and PhD in Mathematics
 - University of Tennessee at Knoxville
 - Webpage: <http://web.utk.edu/~wfeng1/>
 - Email: von198@gmail.com

- **Biography**

Wenqiang Feng is Data Scientist within DST's Applied Analytics Group. Dr. Feng's responsibilities include providing DST clients with access to cutting-edge skills and technologies, including Big Data analytic solutions, advanced analytic and data enhancement techniques and modeling.

Dr. Feng has deep analytic expertise in data mining, analytic systems, machine learning algorithms, business intelligence, and applying Big Data tools to strategically solve industry problems in a cross-functional business. Before joining DST, Dr. Feng was an IMA Data Science Fellow at The Institute for Mathematics and its Applications (IMA) at the University of Minnesota. While there, he helped startup companies make marketing decisions based on deep predictive analytics.

Dr. Feng graduated from University of Tennessee, Knoxville, with Ph.D. in Computational Mathematics and Master's degree in Statistics. He also holds Master's degree in Computational Mathematics from Missouri University of Science and Technology (MST) and Master's degree in Applied Mathematics from the University of Science and Technology of China (USTC).

- **Declaration**

The work of Wenqiang Feng was supported by the IMA, while working at IMA. However, any opinion, finding, and conclusions or recommendations expressed in this material are those of the author and do not necessarily reflect the views of the IMA, UTK and DST.

1.2 Motivation for this tutorial

`Sphinx` is an awesome Python documentation package, and it has excellent facilities for the documentation of software projects in a range of languages. I have been using `Sphinx` for almost 4 years. I was impressed and attracted by `Sphinx` in the first using. And I foud that:

- It supports **several popular output formats**: HTML (including Windows HTML Help), `LaTeX` (for printable PDF versions), `ePub`, `Texinfo`, manual pages, plain text.
- It has **easy publishing routes**: Github.
- It has **extensive cross-references**: semantic markup and automatic links for functions, classes, citations, glossary terms and similar pieces of information
- It has **hierarchical structure**: easy definition of a document tree, with automatic links to siblings, parents and children.
- It has **automatic indices**: general index as well as a language-specific module indices
- It has awesome **code handling**: automatic highlighting using the Pygments highlighter
- It has abundant **extensions**: automatic testing of code snippets, inclusion of docstrings from Python modules (API docs), and more
- It has abundant **contributed extensions**: more than 50 extensions contributed by users in a second repository; most of them installable from PyPI

1.3 Feedback and suggestions

Your comments and suggestions are highly appreciated. I am more than happy to receive corrections, suggestions or feedbacks through email (Wenqiang Feng: von198@gmail.com) for improvements.

CHAPTER TWO

INTRODUCTION

Chinese proverb

If you only know yourself, but not your opponent, you may win or may lose. If you know neither yourself nor your enemy, you will always endanger yourself. – idiom, from Sunzi's Art of War

2.1 Sphinx: Python Documentation Generator

The following descriptions are from [Sphinx](#):

Sphinx is a tool that makes it easy to create intelligent and beautiful documentation, written by Georg Brandl and licensed under the BSD license.

It was originally created for the Python documentation, and it has excellent facilities for the documentation of software projects in a range of languages. Of course, this site is also created from reStructuredText sources using Sphinx! The following features should be highlighted:

- **Output formats:** HTML (including Windows HTML Help), LaTeX (for printable PDF versions), ePub, Texinfo, manual pages, plain text
- **Extensive cross-references:** semantic markup and automatic links for functions, classes, citations, glossary terms and similar pieces of information
- **Hierarchical structure:** easy definition of a document tree, with automatic links to siblings, parents and children
- **Automatic indices:** general index as well as a language-specific module indices
- **Code handling:** automatic highlighting using the Pygments highlighter
- **Extensions:** automatic testing of code snippets, inclusion of docstrings from Python modules (API docs), and more
- **Contributed extensions:** more than 50 extensions contributed by users in a second repository; most of them installable from PyPI

Sphinx uses [reStructuredText](#) as its markup language, and many of its strengths come from the power and straightforwardness of reStructuredText and its parsing and translating suite, the Docutils.

2.2 reStructured Text

The following descriptions are from [reStructuredText](#):

[reStructuredText](#) (RST, ReST, or reST) is a file format for textual data used primarily in the Python programming language community for technical documentation.

2.3 Latex Document Preparation System

The following descriptions are from [LaTeX](#):

[LaTeX](#) (a shortening of Lampert TeX) is a document preparation system. When writing, the writer uses plain text as opposed to the formatted text found in WYSIWYG (“what you see is what you get”) word processors like Microsoft Word, LibreOffice Writer and Apple Pages.

LaTeX is widely used in academia for the communication and publication of scientific documents in many fields, including mathematics, statistics, computer science, engineering, chemistry, physics, economics, linguistics, quantitative psychology, philosophy, and political science.

More information can be get from [LaTeX](#).

CHAPTER
THREE

PACKAGES INSTALLATION

Chinese proverb

A journey of a thousand miles begins with a single step – old Chinese proverb

Warning: It's been 10 years since I abandoned Windows operating systems. So I am a noob for Windows operating systems and I really do not know how to install some packages on Windows operating systems.

3.1 Python Installation

1. Install pip:

```
sudo easy_install pip
```

2. Install python:

```
pip install python
```

3.2 Sphinx Installation

```
pip install -U Sphinx
```

3.3 Latex Installation

You can download the MacTex from: <https://www.tug.org/mactex/> and install it for Mac system. Or you can use the following command to install TexLive on Linux system:

```
sudo apt update && sudo apt install texlive-full
```

SPHINX CONFIGURATION

Warning: I heavily borrowed, modified and used the configuration in `conf.py` and `docgen.py` of Theano package project. I will keep all the comments from Theano team and the copyrights of those files belong to Theano team.

4.1 General HTML Configuration

4.1.1 General Environment Infomation

1. Sphinx extension

```
# Add any Sphinx extension module names here, as strings. They can be
# extensions coming with Sphinx (named 'sphinx.ext.*') or your custom ones.
extensions = ['sphinx.ext.autodoc',
              'sphinx.ext.todo',
              'sphinx.ext.doctest',
              'sphinx.ext.napoleon',
              'sphinx.ext.linkcode']

todo_include_todos = True
napoleon_google_docstring = False
napoleon_include_special_with_doc = False
```

2. Math formula support

```
# We do it like this to support multiple sphinx version without having warning.
# Our buildbot consider warning as error.
try:
    from sphinx.ext import imgmath
    extensions.append('sphinx.ext.imgmath')
except ImportError:
    try:
        from sphinx.ext import pngmath
        extensions.append('sphinx.ext.pngmath')
    except ImportError:
        pass
```

3. Included and excluded folders options

```
# Add any paths that contain templates here, relative to this directory.
templates_path = ['.templates']

# List of directories, relative to source directories, that shouldn't be
# searched for source files.
exclude_dirs = ['images', 'scripts', 'sandbox']
```

4. Image math formula preamble

```
# If false, no module index is generated.
latex_use_modindex = True

default_role = 'math'
pngmath_divpng_args = ['-gamma 1.5', '-D 110']
#pngmath_divpng_args = ['-gamma', '1.5', '-D', '110', '-bg', 'Transparent']
imgmath_latex_preamble = '\\usepackage{amsmath}\n' + \
    '\\usepackage{mathtools}\n' + \
    '\\usepackage{amsfonts}\n' + \
    '\\usepackage{amssymb}\n' + \
    '\\usepackage{dsfont}\n' + \
    '\\def\\Z{\\mathbb{Z}}\n' + \
    '\\def\\R{\\mathbb{R}}\n' + \
    '\\def\\bX{\\mathbf{X}}\n' + \
    '\\def\\X{\\mathbf{X}}\n' + \
    '\\def\\By{\\mathbf{y}}\n' + \
    '\\def\\Bbeta{\\boldsymbol{\\beta}}\n' + \
    '\\def\\U{\\mathbf{U}}\n' + \
    '\\def\\V{\\mathbf{V}}\n' + \
    '\\def\\V1{\\mathbf{1}}\n' + \
    '\\def\\hU{\\mathbf{\\hat{U}}}\n' + \
    '\\def\\hS{\\mathbf{\\hat{\Sigma}}}\n' + \
    '\\def\\hV{\\mathbf{\\hat{V}}}\n' + \
    '\\def\\E{\\mathbf{E}}\n' + \
    '\\def\\F{\\mathbf{F}}\n' + \
    '\\def\\x{\\mathbf{x}}\n' + \
    '\\def\\h{\\mathbf{h}}\n' + \
    '\\def\\v{\\mathbf{v}}\n' + \
    '\\def\\nv{\\mathbf{v}^{\\top}}\n' + \
    '\\def\\nh{\\mathbf{h}^\\top}\n' + \
    '\\def\\s{\\mathbf{s}}\n' + \
    '\\def\\b{\\mathbf{b}}\n' + \
    '\\def\\c{\\mathbf{c}}\n' + \
    '\\def\\W{\\mathbf{W}}\n' + \
    '\\def\\C{\\mathbf{C}}\n' + \
    '\\def\\P{\\mathbf{P}}\n' + \
    '\\def\\T{\\mathcal{T}}\n' + \
    '\\def\\B{\\mathcal{B}}\n'
```

4.1.2 General Project Infomation

1. The suffix of source filenames

```
# The suffix of source filenames.
source_suffix = '.rst'
```

2. The master toctree document

```
# The master toctree document.
master_doc = 'index'
```

3. General substitutions

```
# General substitutions.
project = 'Sphinx with Github Webpages'
copyright = '2019, Wenqiang Feng'
```

4. Version and date format

```
# We need this hokey-pokey because versioneer needs the current
# directory to be the root of the project to work.
# The short X.Y version.
version = '1.00'
# The full version, including alpha/beta/rc tags.
release = '1.00'

# There are two options for replacing |today|: either, you set today to some
# non-false value, then it is used:
#today = ''
# Else, today_fmt is used as the format for a strftime call.
today_fmt = '%B %d, %Y'

# Add any paths that contain custom static files (such as style sheets) here,
# relative to this directory. They are copied after the builtin static files,
# so a file named "default.css" will overwrite the builtin "default.css".
html_static_path = ['images']

# If not '', a 'Last updated on:' timestamp is inserted at every page bottom,
# using the given strftime format.
html_last_updated_fmt = '%b %d, %Y'

# If true, SmartyPants will be used to convert quotes and dashes to
# typographically correct entities.
html_use_smartytags = True
```

4.2 General LaTex Configuration

4.2.1 General LaTeX Output Options

```
# Options for LaTeX output
# -----
#
latex_elements = {
    # The paper size ('letter' or 'a4').
    # latex_paper_size = 'a4',
    #
    # The font size ('10pt', '11pt' or '12pt').
    'pointsize': '12pt',
    #
    # Additional stuff for the LaTeX preamble.
    # latex_preamble = '',
}

# Grouping the document tree into LaTeX files. List of tuples
# (source start file, target name, title, author, document class
# [howto/manual]).
latex_documents = [
    ('index', 'sphinxgithub.tex', 'Sphinx Github Webpage Tutorials',
     'Wenqiang Feng', 'manual'),
]
# The name of an image file (relative to this directory) to place at the top
# of
# the title page.
latex_logo = 'images/logo.png'
```

4.2.2 LaTeX preamble definitions

```
# latex_elements['preamble'] = '\usepackage{xcolor}'
# Additional stuff for the LaTeX preamble.
# latex_preamble
latex_elements['preamble'] = '\\usepackage{amsmath}\n'+\
    '\\usepackage{mathtools}\n'+\
    '\\usepackage{amsfonts}\n'+\
    '\\usepackage{amssymb}\n'+\
    '\\usepackage{dsfont}\n'+\
    '\\def\\Z{\\mathbb{Z}}\n'+\
    '\\def\\R{\\mathbb{R}}\n'+\
    '\\def\\bx{\\mathbf{X}}\n'+\
    '\\def\\X{\\mathbf{X}}\n'+\
    '\\def\\By{\\mathbf{y}}\n'+\
    '\\def\\Bbeta{\\boldsymbol{\\beta}}\n'+\
    '\\def\\bU{\\mathbf{U}}\n'+\
    '\\def\\bV{\\mathbf{V}}\n'+\
    '\\def\\V1{\\mathbf{1}}\n'+\
    '\\def\\hU{\\mathbf{\hat{U}}}\n'+\
```

(continues on next page)

(continued from previous page)

```
'\\def\\hS{\\mathbf{\\hat{\\Sigma}}}\\n'+\
'\\def\\hV{\\mathbf{\\hat{V}}}\\n'+\
'\\def\\E{\\mathbf{E}}\\n'+\
'\\def\\F{\\mathbf{F}}\\n'+\
'\\def\\x{\\mathbf{x}}\\n'+\
'\\def\\h{\\mathbf{h}}\\n'+\
'\\def\\v{\\mathbf{v}}\\n'+\
'\\def\\nv{\\mathbf{v}^{\\{-\\}}}\\n'+\
'\\def\\nh{\\mathbf{h}^{\\{-\\}}}\\n'+\
'\\def\\s{\\mathbf{s}}\\n'+\
'\\def\\b{\\mathbf{b}}\\n'+\
'\\def\\c{\\mathbf{c}}\\n'+\
'\\def\\W{\\mathbf{W}}\\n'+\
'\\def\\C{\\mathbf{C}}\\n'+\
'\\def\\P{\\mathbf{P}}\\n'+\
'\\def\\T{\\mathbf{T}}\\n'+\
'\\def\\B{\\mathbf{B}}\\n'
```

4.3 Full conf.py Script

CHAPTER
FIVE

RESTRUCTUREDTEXT MARKUP

Chinese proverb

Making full preparation will not delay your job but quicken the process. – old Chinese proverb

5.1 reStructuredText Primer

I would refer the reader to [Sphinx2019] and [Georg2018] for more details.

5.1.1 Sections

Sections are identified through their titles, which are marked up with adornment: “underlines” below the title text, or underlines and matching “overlines” above the title. More details can be found at: <http://docutils.sourceforge.net/docs/ref/rst/restructuredtext.html#sections>

reStructuredText:

```
=====
Section Title
=====

Subsection Title
++++++

Subsubsection Title
-----
```

5.1.2 Paragraphs

The paragraph is the most basic block in a reST document. Paragraphs are simply chunks of text separated by one or more blank lines. As in Python, indentation is significant in reST, so all lines of the same paragraph must be left-aligned to the **same level of indentation**. More details can be found at: <http://docutils.sourceforge.net/docs/ref/rst/restructuredtext.html#paragraphs>

1. General Paragraphs

reStructuredText:

```
This is the first demo paragraph. The blank line above  
the first line is required; The blank line below the last  
line is required.
```

```
This is the second demo paragraph. The blank line above  
the first line is required; The blank line below the last  
line is required.
```

Syntax diagram:

```
+-----+  
| paragraph |  
|           |  
+-----+  
  
+-----+  
| paragraph |  
|           |  
+-----+
```

Result:

This is the first demo paragraph. The blank line above the first line is required; The blank line below the last line is required.

This is the second demo paragraph. The blank line above the first line is required; The blank line below the last line is required.

2. Bullet Lists Paragraphs

reStructuredText:

```
- This is the first bullet list item. The blank line above the  
first list item is required; blank lines between list items  
(such as below this paragraph) are optional.  
  
- This is the first paragraph in the second item in the list.  
  
    This is the second paragraph in the second item in the list.  
    The blank line above this paragraph is required. The left edge  
    of this paragraph lines up with the paragraph above, both  
    indented relative to the bullet.  
  
    - This is a sublist. The bullet lines up with the left edge of  
      the text blocks above. A sublist is a new list so requires a  
      blank line above and below.  
  
    - This is a sublist. The bullet lines up with the left edge of  
      the text blocks above. A sublist is a new list so requires a  
      blank line above and below.
```

(continues on next page)

(continued from previous page)

```
- This is the third item of the main list.
```

```
This paragraph is not part of the list.
```

Syntax diagram:

```
+-----+-----+
| "- " | list item           |
+-----| (body elements) +   |
+-----+-----+
```

Result:

- This is the first bullet list item. The blank line above the first list item is required; blank lines between list items (such as below this paragraph) are optional.
- This is the first paragraph in the second item in the list.

This is the second paragraph in the second item in the list. The blank line above this paragraph is required. The left edge of this paragraph lines up with the paragraph above, both indented relative to the bullet.

- This is a sublist. The bullet lines up with the left edge of the text blocks above. A sublist is a new list so requires a blank line above and below.
- This is a sublist. The bullet lines up with the left edge of the text blocks above. A sublist is a new list so requires a blank line above and below.
- This is the third item of the main list.

This paragraph is not part of the list.

3. Bullet Lists Paragraphs

reStructuredText:

```
1. This is the first bullet list item. The blank line above the
first list item is required; blank lines between list items
(such as below this paragraph) are optional.
```

```
2. This is the first paragraph in the second item in the list.
```

This is the second paragraph in the second item in the list. The blank line above this paragraph is required. The left edge of this paragraph lines up with the paragraph above, both indented relative to the bullet.

a. This is a sublist. The bullet lines up with the left edge of the text blocks above. A sublist is a new list so requires a blank line above and below.

b. This is a sublist. The bullet lines up with the left edge of

(continues on next page)

(continued from previous page)

```
the text blocks above. A sublist is a new list so requires a  
blank line above and below.
```

```
3. This is the third item of the main list.
```

Result:

1. This is the first bullet list item. The blank line above the first list item is required; blank lines between list items (such as below this paragraph) are optional.
2. This is the first paragraph in the second item in the list.

This is the second paragraph in the second item in the list. The blank line above this paragraph is required. The left edge of this paragraph lines up with the paragraph above, both indented relative to the bullet.

- a. **This is a sublist. The bullet lines up with the left edge of** the text blocks above. A sublist is a new list so requires a blank line above and below.
 - b. **This is a sublist. The bullet lines up with the left edge of** the text blocks above. A sublist is a new list so requires a blank line above and below.
3. This is the third item of the main list.

Syntax diagram:

```
+-----+-----+  
| "1. " | list item |  
+-----| (body elements) + |  
+-----+
```

Result:

1. This is the first bullet list item. The blank line above the first list item is required; blank lines between list items (such as below this paragraph) are optional.
2. This is the first paragraph in the second item in the list.

This is the second paragraph in the second item in the list. The blank line above this paragraph is required. The left edge of this paragraph lines up with the paragraph above, both indented relative to the bullet.

- a. This is a sublist. The bullet lines up with the left edge of the text blocks above. A sublist is a new list so requires a blank line above and below.
 - b. This is a sublist. The bullet lines up with the left edge of the text blocks above. A sublist is a new list so requires a blank line above and below.
3. This is the third item of the main list.

4. Blocked Paragraphs

a. Line Blocks

reStructuredText:

```
Take it away, Eric the Orchestra Leader!
```

```
| A one, two, a one two three four  
|  
| Half a bee, philosophically,  
|     must, *ipso facto*, half not be.  
| But half the bee has got to be,  
|     *vis a vis* its entity. D'you see?  
  
| But can a bee be said to be  
|     or not to be an entire bee,  
|         when half the bee is not a bee,  
|             due to some ancient injury?  
  
| Singing...
```

Syntax diagram:

```
+-----+  
| " | " | line  
+-----| continuation line  
      +-----+
```

Result:

```
Take it away, Eric the Orchestra Leader!
```

```
A one, two, a one two three four
```

```
Half a bee, philosophically,  
    must, ipso facto, half not be.
```

```
But half the bee has got to be,  
    vis a vis its entity. D'you see?
```

```
But can a bee be said to be  
    or not to be an entire bee,  
        when half the bee is not a bee,  
            due to some ancient injury?
```

```
Singing...
```

5. Doctest Blocks

reStructuredText:

```
This is an ordinary paragraph.  
  
>>> print 'this is a Doctest block'  
this is a Doctest block
```

(continues on next page)

(continued from previous page)

The following is a literal block::

```
>>> This is not recognized as a doctest block by  
reStructuredText. It *will* be recognized by the doctest  
module, though!
```

Result:

This is an ordinary paragraph.

```
>>> print 'this is a Doctest block'  
this is a Doctest block
```

The following is a literal block:

```
>>> This is not recognized as a doctest block by  
reStructuredText. It *will* be recognized by the doctest  
module, though!
```

3. Field Lists

reStructuredText:

```
:Date: 2001-08-16  
:Version: 1  
:Authors: - Me  
          - Myself  
          - I  
:Indentation: Since the field marker may be quite long, the second  
and subsequent lines of the field body do not have to line up  
with the first line, but they must be indented relative to the  
field name marker, and they must line up with each other.  
:Parameter i: integer
```

Result:

:header-rows: 1

* - Treat
  - Quantity
  - Description
* - Albatross
  - 2.99
  - On a stick!
* - Crunchy Frog
  - 1.49
  - If we took the bones out, it wouldn't be
    crunchy, now would it?
* - Gannet Ripple
  - 1.99
  - On a stick!
```

Table 2: Frozen Delights!

Treat	Quantity	Description
Albatross	2.99	On a stick!
Crunchy Frog	1.49	If we took the bones out, it wouldn't be crunchy, now would it?
Gannet Ripple	1.99	On a stick!

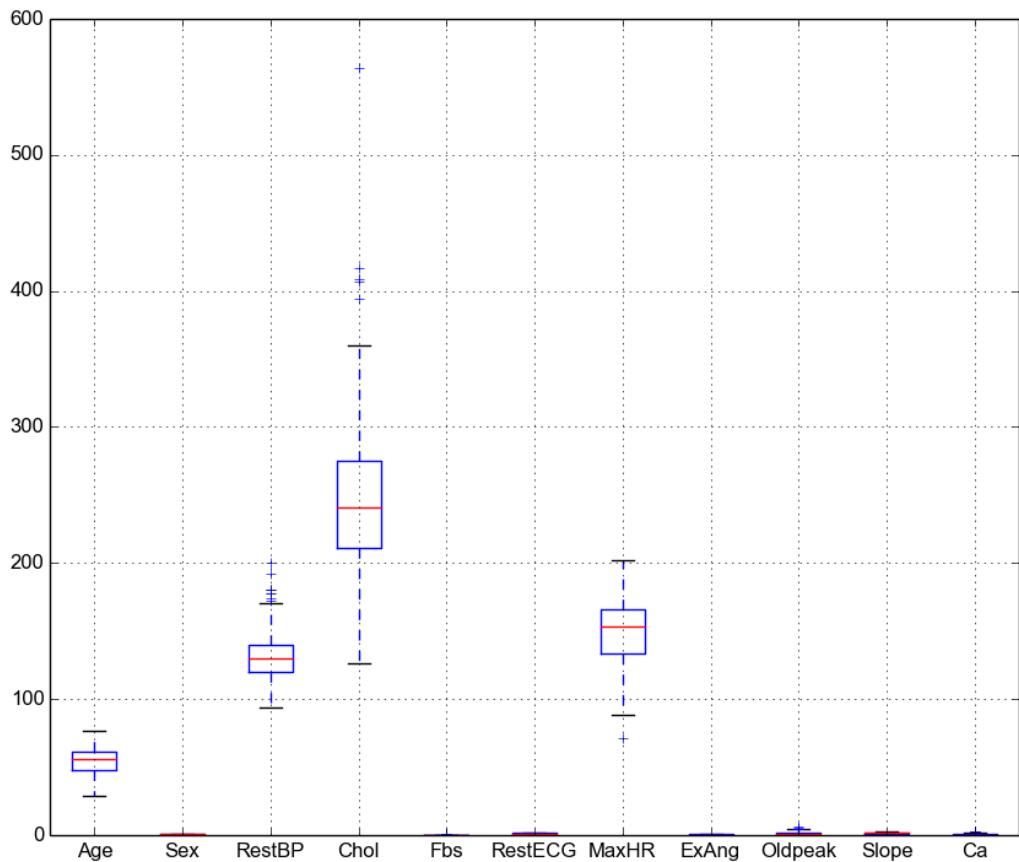

5.1.4 Images and Figures

There are two image directives: `image` and `figure`. More details can be found at: <http://docutils.sourceforge.net/docs/ref/rst/directives.html#image>.

1. Simple import

reStructuredText:

```
.. image:: images/boxp.png
```

reStructuredText:

```
.. figure:: images/avg_rating_mon.png
:scale: 50 %
:alt: map to buried treasure
```

This is the caption of the figure (a simple paragraph).

2. Complex import

reStructuredText:

```
.. figure:: images/bboxp.png
:height: 400 px
:width: 800 px
:scale: 50 %
:alt: alternate text
:align: right
```

This is the caption of the figure (a simple paragraph).

(continues on next page)

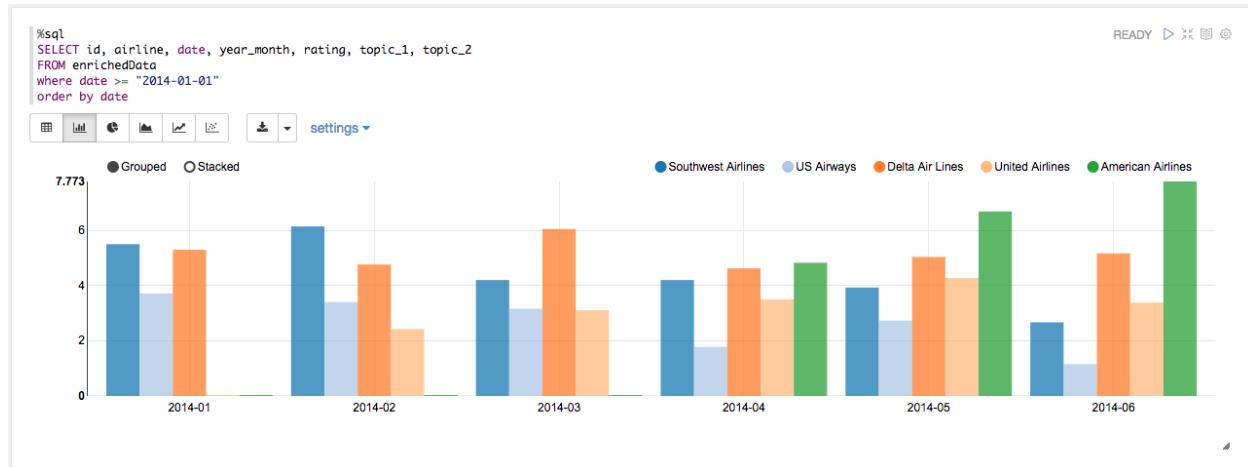

Fig. 1: This is the caption of the figure (a simple paragraph).

(continued from previous page)

3. Figures in table

reStructuredText:

Figures	Description
.. figure:: images/corr.png	Figure 1: test
:scale: 20 %	
.. image:: images/corr.png	Figure 2: test
:scale: 20 %	
.. image:: images/corr.png	Figure 3: test
:scale: 20 %	

Result:

Figures	Description
	Figure 1: test
	Figure 2: test
	Figure 3: test

5.1.5 Math

The math role marks its content as mathematical notation (inline formula). More details can be found at: <http://www.sphinx-doc.org/es/stable/ext/math.html>.

The input language for mathematics is LaTeX markup. I will not do a LaTex tutorial as here.

1. Inline formula

reStructuredText:

```
The area of a circle is :math:`A_{\text{c}} = (\pi/4) d^2`.
```

RResult:

The area of a circle is $A_c = (\pi/4)d^2$.

2. Equations

reStructuredText:

```
.. math::
:label: eq_lin_cost_func

\min _{\beta \in \mathbb{R}^p} \frac{1}{n} \| \hat{X} \beta - \hat{Y} \|^2
```

The equation :eq:`eq_lin_cost_func` is the cost function for linear regression.

Result:

$$\min_{\beta \in \mathbb{R}^p} \frac{1}{n} \| \hat{X} \beta - \hat{Y} \|^2 \quad (5.1)$$

The equation (5.1) is the cost function for linear regression.

3. User defined symbol and equation

Add your definitions to the `latex_elements['preamble']` and `imgmath_latex_preamble`, then you can apply your own notations for symbol and equations.

my definitions for \mathcal{B} symbol and $e^{i\pi} + 1 = 0$ equation:

```
'\\def\\B{{\\bf \\mathcal B}}\n'+\n'\\def\\euler{\\ e^{i\\pi} + 1 = 0}\n'
```

reStructuredText:

```
The is a test for the user defined math symbol: :math:`\B`.
```

The is a test for the user defined math equation:

```
.. math::\n\n\\euler
```

The is a test for the user defined math symbol: \mathcal{B} .

The is a test for the user defined math equation:

$$e^{i\pi} + 1 = 0$$

4. More examples

reStructuredText:

```
.. math::  
  
    f(x)  
    =  
    \Biggl \lbrace  
    {  
    0, \text{ if }  
    { x >0 }  
    \atop  
    1 \text{ otherwise }  
    }  
  
.. math::  
  
    (a + b)^2 &= (a + b)(a + b) \\  
    &= a^2 + 2ab + b^2  
  
.. math::  
:nowrap:  
  
    \begin{eqnarray}  
    y &= ax^2 + bx + c \nonumber\\  
    f(x) &= x^2 + 2xy + y^2 \nonumber  
    \end{eqnarray}  
  
.. math:: e^{i\pi} + 1 = 0  
:label: euler
```

Result:

$$f(x) = \begin{cases} 0, & \text{if } x > 0 \\ 1 & \text{otherwise} \end{cases}$$

$$\begin{aligned} (a + b)^2 &= (a + b)(a + b) \\ &= a^2 + 2ab + b^2 \end{aligned}$$

$$\begin{aligned} y &= ax^2 + bx + c \\ f(x) &= x^2 + 2xy + y^2 \end{aligned}$$

$$e^{i\pi} + 1 = 0 \tag{5.2}$$

5.1.6 Source Codes

1. Source code block

reStructuredText:

```
.. code-block:: python

    """
    This is a source Python code demo for Sphinx.
    @date: Apr 25, 2016
    @author: Wenqiang Feng
    """

    import pandas as pd
    import numpy as np
    import matplotlib.pyplot as plt
    from pandas.tools.plotting import scatter_matrix
    from docutils.parsers.rst.directives import path

    if __name__ == '__main__':
        print("This is a source Python code demo for Sphinx.")
```

Result:

```
"""
This is a source Python code demo for Sphinx.
@date: Apr 25, 2016
@author: Wenqiang Feng
"""

import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
from pandas.tools.plotting import scatter_matrix
from docutils.parsers.rst.directives import path

if __name__ == '__main__':
    print("This is a source Python code demo for Sphinx.")
```

reStructuredText:

```
.. code-block:: r

    """
    This is a source R code demo for Sphinx.
    @date: Apr 25, 2016
    @author: Wenqiang Feng
    """

    library(reshape2)
    library(ggplot2)

    # import data
    d <- melt(diamonds[,-c(2:4)])
    # plot histogram
```

(continues on next page)

(continued from previous page)

```
ggplot(d,aes(x = value)) +  
    facet_wrap(~variable,scales = "free_x") +  
    geom_histogram()  
  
print("This is a source R code demo for Sphinx.")
```

```
'''  
This is a source R code demo for Sphinx.  
@date: Apr 25, 2016  
@author: Wengiang Feng  
library(reshape2)  
library(ggplot2)  
  
# import data  
d <- melt(diamonds[,-c(2:4)])  
# plot histogram  
ggplot(d,aes(x = value)) +  
    facet_wrap(~variable,scales = "free_x") +  
    geom_histogram()  
  
print("This is a source R code demo for Sphinx.")
```

2. Source code import

- Python Source code

reStructuredText:

```
.. literalinclude:: code/sourceCodePy.py  
    :language: python
```

Result:

```
'''  
This is a source Python code demo for Sphinx.  
@date: Apr 25, 2016  
@author: Wengiang Feng  
import pandas as pd  
import numpy as np  
import matplotlib.pyplot as plt  
from pandas.tools.plotting import scatter_matrix  
from docutils.parsers.rst.directives import path  
  
if __name__ == '__main__':  
  
    print("This is a source Python code demo for Sphinx.")
```

- R Source code

reStructuredText:

```
.. literalinclude:: code/sourceCodeR.R
    :language: r
```

Result:

```
'''
This is a source R code demo for Sphinx.
@date: Apr 25, 2016
@author: Wenqiang Feng
'''

library(reshape2)
library(ggplot2)

# import data
d <- melt(diamonds[,-c(2:4)])
# plot histogram
ggplot(d,aes(x = value)) +
  facet_wrap(~variable,scales = "free_x") +
  geom_histogram()

print("This is a source R code demo for Sphinx.")
```

5.1.7 Reference

1. Paper reference

reStructuredText:

```
.. [Ref] Book or article reference, URL or whatever.

Lorem ipsum [Ref] dolor sit amet.
```

Result:

Lorem ipsum [Ref] dolor sit amet.

I would refer the reader to [Sphinx2019] for more details.

2. Equation reference

reStructuredText:

```
.. math::
:label: eq_condition

f(x)
=
\Biggl \lbrace
{
0,\text{ if }
```

(continues on next page)

(continued from previous page)

```
{ x >0}  
\atop  
1 \text{ otherwise }
```

The Equation :eq:`eq_condition` is the definition of :math:`f(x)`.

Result:

$$f(x) = \begin{cases} 0, & \text{if } x > 0 \\ 1 & \text{otherwise} \end{cases} \quad (5.3)$$

The Equation (5.3) is the definition of $f(x)$.

4. Figure reference

reStructuredText:

```
... _fig_hist_demo:  
.. figure:: images/avg_rating_mon.png  
    :scale: 50 %  
    :alt: map to buried treasure
```

The histogram of the grouped dataset

The Figure. :ref:`fig_hist_demo` is the histogram of the grouped dataset.

Result:

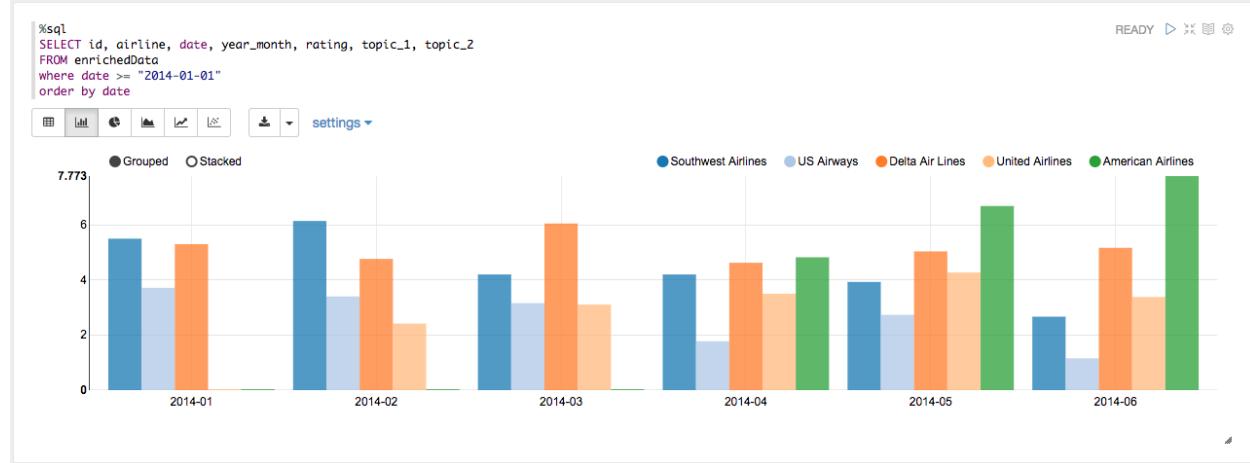

Fig. 5: The histogram of the grouped dataset

The Figure. *The histogram of the grouped dataset* is the histogram of the grouped dataset.

5. Table reference

reStructuredText:

```
.. _table_demo:
.. table:: The general table demo

+-----+-----+-----+-----+
| Header row, column 1 | Header 2 | Header 3 | Header 4 |
| (header rows optional) |           |           |           |
+=====+=====+=====+=====+
| body row 1, column 1 | column 2 | column 3 | column 4 |
+-----+-----+-----+-----+
| body row 2           | Cells may span columns. |
+-----+-----+-----+-----+
| body row 3           | Cells may   | - Table cells   |
+-----+-----+-----+-----+
| body row 4           | span rows. | - contain      |
|                       |           | - body elements. |
+-----+-----+-----+-----+
```

Please see the above Table. :ref:`table_demo`.

Result:

Table 3: The general table demo

Header row, column 1 (header rows optional)	Header 2	Header 3	Header 4
body row 1, column 1	column 2	column 3	column 4
body row 2	Cells may span columns.		
body row 3	Cells may span rows.	<ul style="list-style-type: none"> • Table cells • contain • body elements. 	
body row 4			

Please see the above Table. *The general table demo*.

6. Footnotes

reStructuredText:

```
 Lorem ipsum [#f1]_ dolor sit amet ... [#f2]_
 
 .. rubric:: Footnotes

 .. [#f1] Text of the first footnote.
 .. [#f2] Text of the second footnote.
```

Result:

Lorem ipsum¹ dolor sit amet ...²

7. Hyperlinks

¹ Text of the first footnote.

² Text of the second footnote.

- General hyperlink

reStructuredText:

```
You are more than welcome to visit my personal webpage: `Feng Website`_.  
.. _Feng Website: http://web.utk.edu/~wfeng1/
```

Result:

You are more than welcome to visit my personal webpage: Feng Website.

- Embedded Youtube link:

reStructuredText:

```
.. raw:: html  
  
<iframe width="700" height="315"  
src="https://www.youtube.com/embed/mrEee4bhc7Y"  
frameborder="0" allowfullscreen></iframe>
```

Result:

```
Warning: You have to use the hyperlink: https://www.youtube.com/embed/ + name.
```

5.2 Roles

A role or “custom interpreted text role” is an inline piece of explicit markup. It signifies that the enclosed text should be interpreted in a specific way. Sphinx uses this to provide semantic markup and cross-referencing of identifiers, as described in the appropriate section. More details can be found at: <http://docutils.sourceforge.net/docs/ref/rst/roles.html#customization>

5.2.1 Standard Roles

- Line markup

reStructuredText:

```
* emphasis - equivalent of *emphasis*  
  
* strong - equivalent of **strong**  
  
* literal - equivalent of ``literal``  
  
* subscript - H\ :sub:`2`\ O  
  
* superscript - E = mc\ :sup:`2`
```

(continues on next page)

(continued from previous page)

```
* title-reference – for titles of books, periodicals, and other materials
```

Result:

- emphasis – equivalent of *emphasis*
- strong – equivalent of **strong**
- literal – equivalent of `literal`
- subscript – H₂O
- superscript – E = mc²
- title-reference – for titles of books, periodicals, and other materials

5.2.2 Specialized Roles

- `raw`

reStructuredText:

```
.. raw:: html

<iframe width="700" height="315"
src="https://www.youtube.com/embed/2Mg8QD0F1dQ"
frameborder="0" allowfullscreen></iframe>
```

Result:

reStructuredText:

```
.. role:: raw-html(raw)
:format: html

If there just *has* to be a line break here,
:raw-html:`<br />`
it can be accomplished with a "raw"-derived role.
But the line block syntax should be considered first.
```

Result:

If there just *has* to be a line break here,

it can be accomplished with a “raw”-derived role. But the line block syntax should be considered first.

- `replace`

reStructuredText:

```
.. |sphx| replace:: Sphinx
.. |reST| replace:: reStructuredText
```

(continues on next page)

(continued from previous page)

```
|reST| is awesome!
```

Sphinx and reStructuredText are awesome!

5.3 Directives

A directive is a generic block of explicit markup. Along with roles, it is one of the extension mechanisms of reST, and Sphinx makes heavy use of it.

5.3.1 Admonitions

Admonitions: attention, caution, danger, error, hint, important, note, tip, warning

- **attention**

reStructuredText:

```
.. attention::
```

```
    You neen to pay attention at here!
```

Result:

```
Attention: You neen to pay attention at here!
```

- **caution**

reStructuredText:

```
.. caution::
```

```
    This is a caution alert!
```

Restlut:

```
Caution: This is a caution alert!
```

- **important**

reStructuredText:

```
.. important::
```

```
    This is important!
```

Result:

Important: This is important!

- **User defined admonition**

reStructuredText:

```
.. admonition:: User defined name  
    You can make up your own admonition too.
```

Result:

User defined name

You can make up your own admonition too.

- **seealso**

reStructuredText:

```
.. seealso::  
  
    The authoritative `reStructuredText User Documentation  
    <http://docutils.sourceforge.net/rst.html>`_. The "ref" links in this  
    document link to the description of the individual constructs in the reST  
    reference.
```

Result:

See also:

The authoritative [reStructuredText User Documentation](#). The “ref” links in this document link to the description of the individual constructs in the reST reference.

See more details at [Admonitions](#).

CHAPTER SIX

API EXAMPLE

6.1 rnorm

`statspy.basics.rnorm(n, mean=0, sd=1)`

Random generation for the normal distribution with mean equal to mean and standard deviation equation to sd same functions as rnorm in r: `rnorm(n, mean=0, sd=1)`

Parameters

- **n** – the number of the observations
- **mean** – vector of means
- **sd** – vector of standard deviations

Returns the vector of the random numbers

Author Wenqiang Feng

Email von198@gmail.com

6.2 dnorm

`statspy.basics.dnorm(x, mean=0, sd=1, log=False)`

Density of the normal distribution with mean equal to mean and standard deviation equation to sd same functions as rnorm in r: `dnorm(x, mean=0, sd=1, log=FALSE)`

Parameters

- **x** – the vector od quantiles
- **mean** – vector of means
- **sd** – vector of standard deviations

Returns the list of the density

Author Wenqiang Feng

Email von198@gmail.com

6.3 runif

`statspy.basics.runif(n, min=0, max=1)`

Random generation from the uniform distribution same functions as rnorm in r: `runif(n, min=0, max=1)`

Parameters

- **n** – the number of the observations
- **min** – the lower limit of the distribution
- **max** – the upper limit of the distribution

Returns the list of n uniform random numbers

Author Wenqiang Feng

Email von198@gmail.com

6.4 T-test

`statspy.tests.t_test(x, y=None, mu=0.0, conf_level=0.95)`

Performs one and two sample t-tests on vectors of data.

same functions as t.test in r: `t.test(x, ...)`

```
t.test(x, y = NULL,  
       alternative = c("two.sided", "less", "greater"),  
       mu = 0, paired = FALSE, var.equal = FALSE,  
       conf.level = 0.95, ...)
```

Parameters

- **x** – a (non-empty) numeric vector of data values.
- **y** – an optional (non-empty) numeric vector of data values.
- **mu** – vector of standard deviations.
- **conf_level** – confidence level of the interval.

Returns the vector of the random numbers.

Author Wenqiang Feng

Email von198@gmail.com

CHAPTER SEVEN

PUBLISHING ON GITHUB

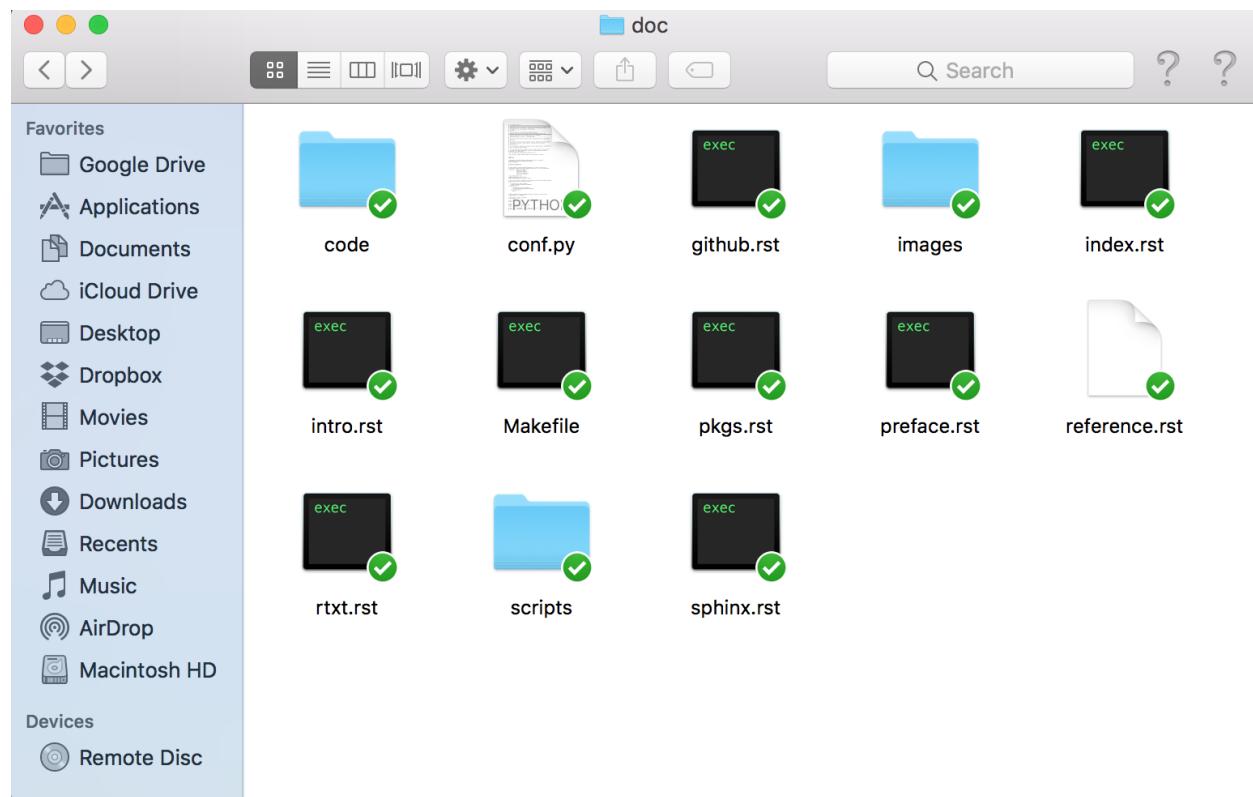

Chinese proverb

sharing your happiness is much better than enjoying your happiness by your own.

7.1 Create reStructuredTexts

7.1.1 Create reStructuredTexts

Use the tips in *reStructuredText Markup* to create your reStructuredTexts and add them in one folder, for example doc.

7.1.2 Add them in `index.rst`

```
=====
Contents
=====

.. toctree::
   :maxdepth: 2

preface
intro
pkgs
sphinx
rtxt
github
reference
```

7.1.3 Compile the reStructuredTexts files

1. Change the directory to the folder

```
cd MyTutorial/SphinxGithub/doc
```

2. Compile

```
make
```

Then you should get two more folders: `docs` and `latex`.

7.2 Create Repository on Github

7.3 Commit reStructuredTexts folder to Repository

Open Terminal and do the following steps:

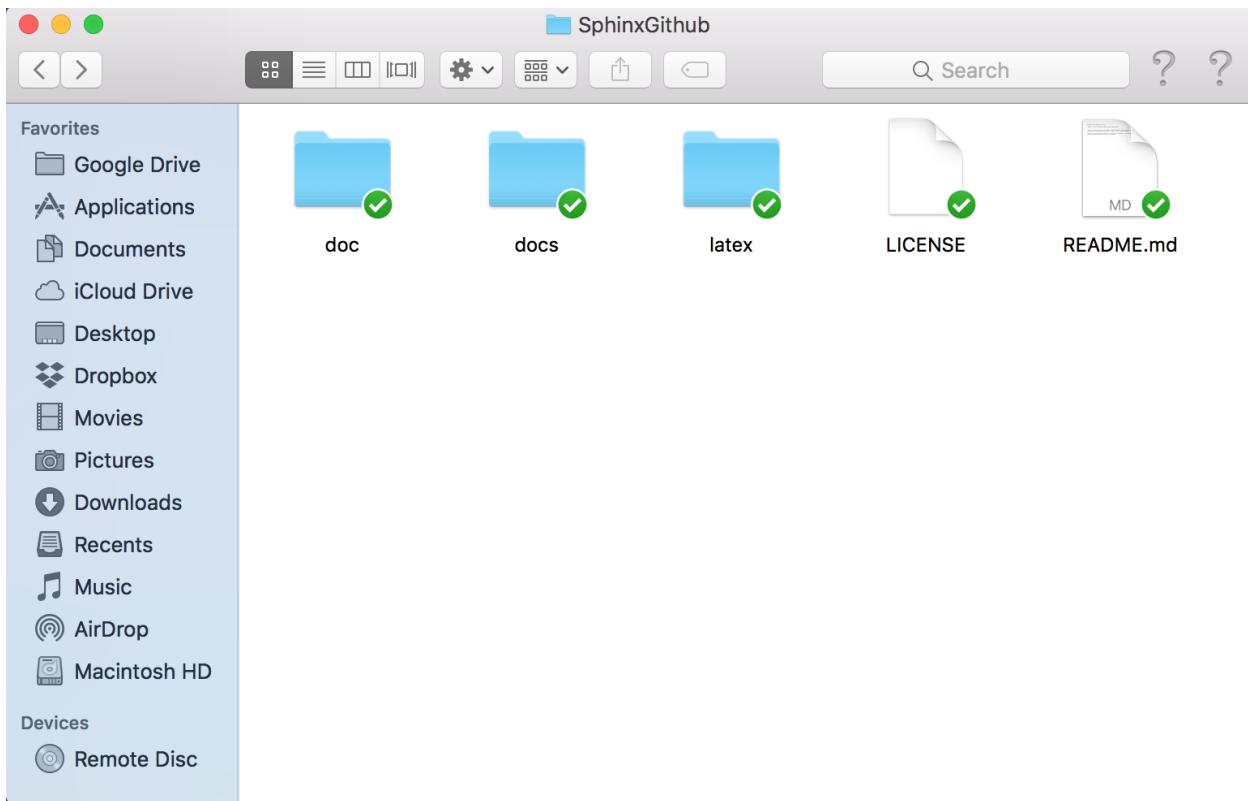

```
git init

git add .
# Adds the files in the local repository and stages them for commit. To unstage a file, use 'git reset HEAD YOUR-FILE'.

git commit -m "First commit"
# Commits the tracked changes and prepares them to be pushed to a remote repository. To remove this commit and modify the file, use 'git reset --soft HEAD~1' and commit and add the file again.

git remote add origin remote repository URL
```

(continues on next page)

(continued from previous page)

```
# Sets the new remote
git remote -v
# Verifies the new remote URL

git push -u origin master
# Pushes the changes in your local repository up to the remote repository you
→specified as the origin
```

7.4 Setup Github Pages on Github

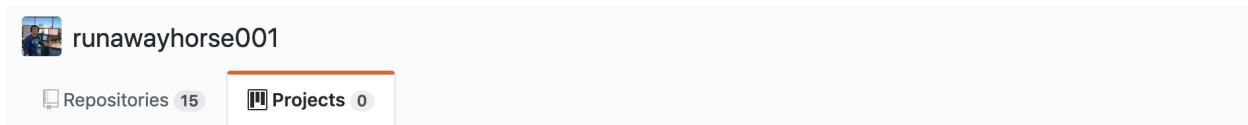

7.4.1 Repository

Once you committed your repository to the Github, you will get:

7.4.2 Setup Github Pages

1. Go to Settings button in your repository
2. Set up the Github pages source
3. Enjoy your Github Pages

Sphinx with Github Webpages, Release 1.00

Linked repositories

Search runawayhorse001 to link repositories to this project for more accurate suggestions and better search results.

Search by repository name

↪ Linked repositories: None yet!

A screenshot of the GitHub repository page for 'runawayhorse001 / SphinxGithub'. The repository has 22 commits, 1 branch, 0 releases, 1 environment, 1 contributor, and an MIT license. It includes links for sphinx, python3, latex, pdf, and Manage topics. The commit history shows several additions of icons and files like .gitignore and LICENSE. A green 'Clone or download' button is visible at the bottom right.

README.md		

The screenshot shows the GitHub repository settings for 'SphinxGitHub'. The left sidebar contains navigation links: Options, Collaborators, Branches, Webhooks, Notifications, Integrations & services, Deploy keys, Moderation, and Interaction limits. The main area is titled 'Settings' and includes sections for 'Repository name' (set to 'SphinxGitHub') and 'Features'. Under 'Features', two checkboxes are checked: 'Wikis' (described as a simple way for others to contribute content) and 'Restrict editing to collaborators only' (described as making public wikis readable by everyone). At the top right, there are buttons for Unwatch (1), Unstar (1), Fork (0), and Settings.

GitHub Pages

[GitHub Pages](#) is designed to host your personal, organization, or project pages from a GitHub repository.

The screenshot shows the GitHub Pages settings interface. It displays a green success message: '✓ Your site is published at <https://runawayhorse001.github.io/SphinxGitHub/>'. Below this, the 'Source' section indicates the site is built from the 'master branch /docs folder' in the master branch. A 'Save' button is present. A dropdown menu titled 'Select source' shows three options: 'master branch' (disabled), 'master branch /docs folder' (selected and highlighted in blue), and 'None'. A checked checkbox 'Enforce HTTPS' is also shown. At the bottom, a note about HTTPS security is displayed.
